

## 5. evoBackOffice Dashboard Weather Widget

evoBackOffice dashboard has a weather interface that displays a snapshot of the next 5 days local forecast, handy when producing stock orders, planning staffing and other business events. To set this up stores first need to register with the met office website and download the free API usage app.

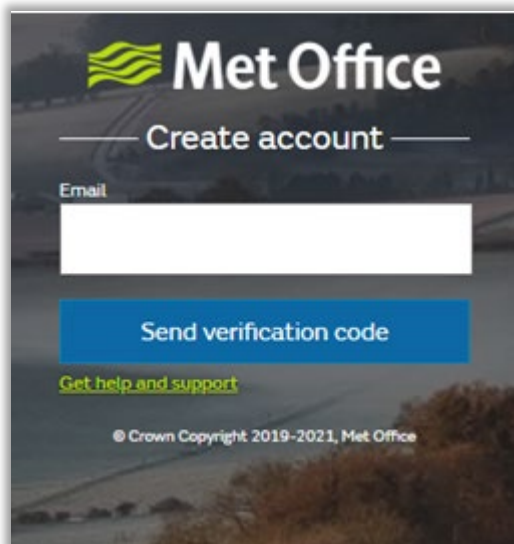

Go to the met office website.

<https://metoffice.apiconnect.ibmcloud.com/metoffice/production/>

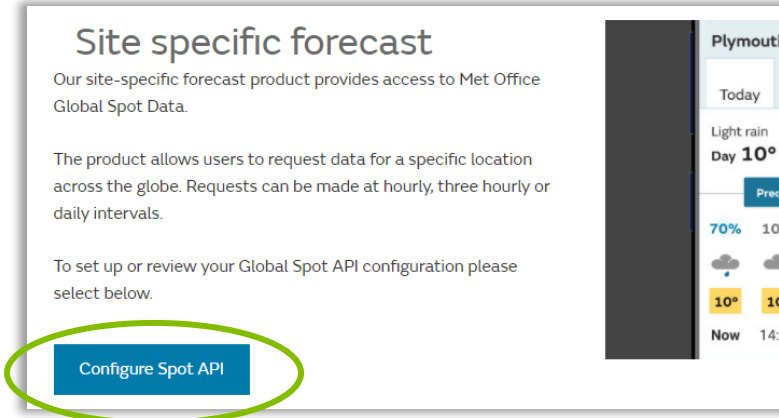

- Select – Register to get started.

- Enter email address.
- Click on Send Validation code.
- Copy validation code sent in email into create account screen.
- Select Verify Code.
- Enter name and create Password for account.
- Read and accept terms & conditions.
- Select - Create.

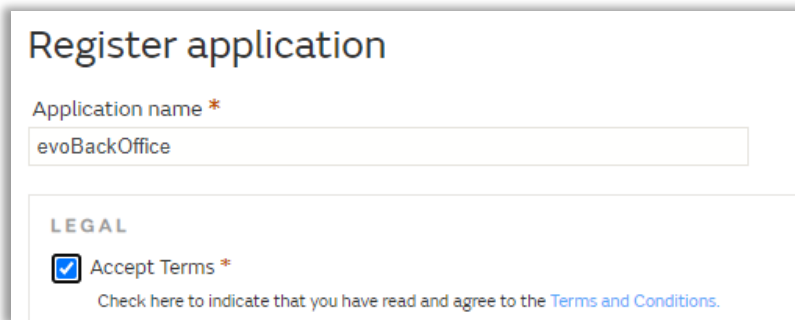

Screen may take a few moments to process and return.

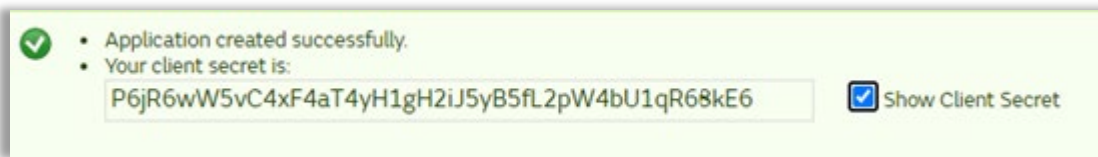

- Select - Configure Spot API

st [Register an application](#)

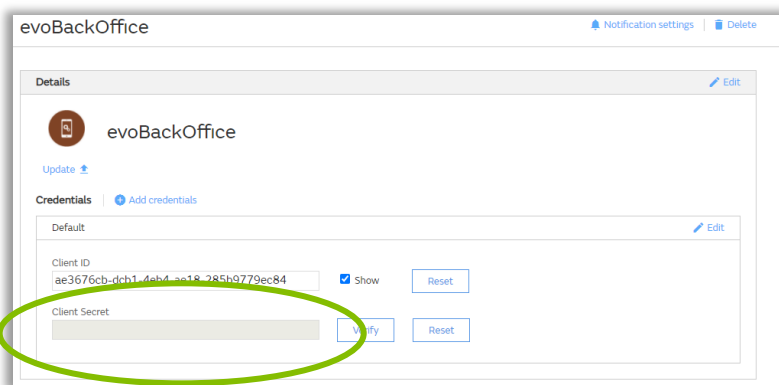

- Select - Register an application

- Type in a name for the application – suggest evoBackOffice.
- ✓ Accept terms
- Select - Submit

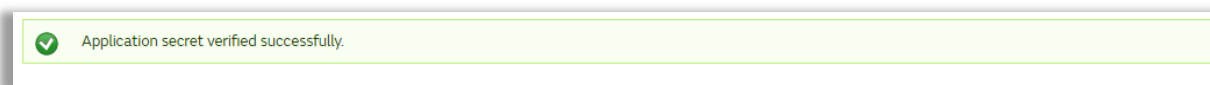

- ✓ to show client secret
- **Copy code and save to use at next step and in evoBackOffice later.**

- Enter code into client secret.
- **Copy ID code and save to use in evoBackOffice later.**
- Select verify.
- Enter secret code again at next screen
- Select Submit

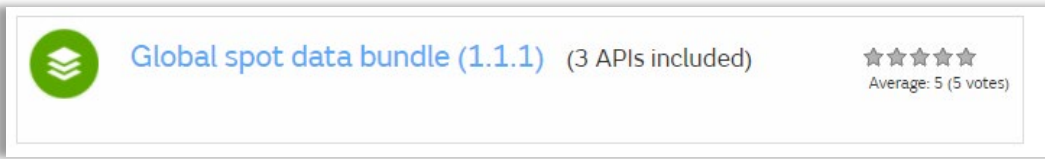

Screen will confirm application successful.

From website page

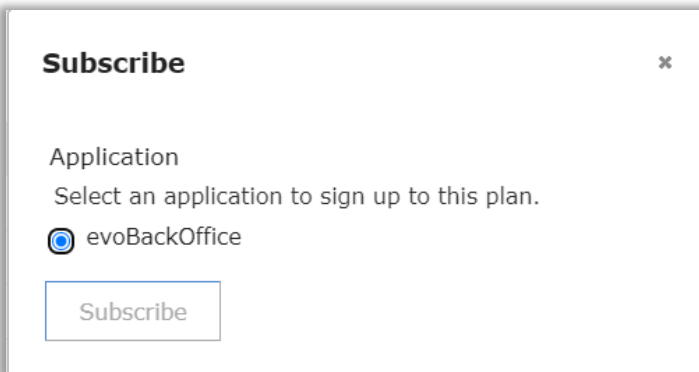

Select API Usage Plans

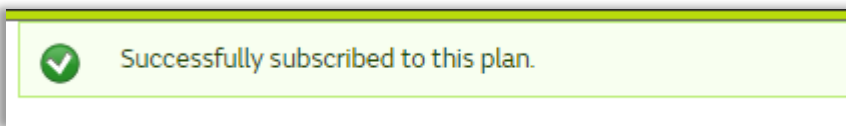

Select Global spot data bundle.

Select Subscribe to free basic bundle.

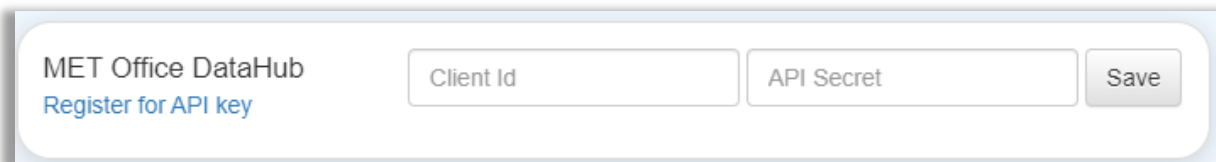

Select the application to use.  
Select Subscribe

Screen will confirm subscription successful.

### In evoBackOffice

Enter the ID code and Secret code.  
Select Save.

If the MET Office DataHub is not showing on your evoBackOffice home screen dashboard contact customer support to configure this.  
(Stores do still need to register and subscribe as detailed here to obtain their own codes).
