

# Fuel Dispense Limit

evoPOS can be configured to allow the cashiers to enter preset amounts of fuel to be drawn from pumps when authorizing.

Once the new function has been enabled by the support team, to activate at the POS it is essential to reboot the POS using POS Exit (NOT POS restart).

From the Functions menu select **Exit**  
*NOTE- the Exit function may require Supervisor or Manager authorisation depending on your store's configuration.*

Once the POS has restarted  
 Select **Start POS** from the desktop.

## Changes at POS to authorising fuel sales

**1**

When the nozzle is lifted and pump is awaiting authorization, the calling pump sound, and green button are displayed as usual.

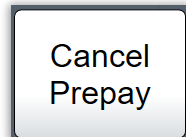

- Select pump

**2**

- Select **Authorise**

*If customer replaces the nozzle without drawing any fuel, the authorisation Preset may need to be cancelled.*

- Select the pump button
- Select Cancel Prepay

**3**

The screen will prompt the cashier to either

- Select lower pre set value (car)
- Select higher pre set value (HGV)
- Or Key in an alternate value

*NOTE - when keying in value if not whole £s a decimal point is required.*

Preset Limit Pump 2				Amount
7	8	9	Red Stop	
4	5	6	Del	
1	2	3	Tab	35.00
.	0	00	Enter	200.00

**4**

Pump will automatically stop when pre-authorized value is reached if the customer does not replace the hose before.

Customers will pay in store as usual.
